

#### NON-PUSHER ELASTOMER, DRY RUNNING, NON CONTACTING, SECONDARY CONTAINMENT GAS SEAL

Technical Specification

- A Primary ring
- **B** Mating ring
- C NPSS
- D Band
- E Spring adapter
- F Spring
- G Retainer
- **H** Snap ring
- Stub sleeve

#### **Product Description**

The John Crane 8628VSC is a standardized non-pusher elastomer, dry running, non-contacting, secondary containment seal designed specifically for non-crude oil hydrocarbon services, with a focus on meeting the demanding requirements of pipeline pumping station duties.

The main risk of seal failure in these applications is due to the numerous problems associated with the secondary dynamic O-Ring, potentially resulting in hang-up, fretting or stub sleeve wear. The design of the 8628VSC completely eliminates these common problems.

The 8628VSC is used in tandem with a primary seal such as the 8648VRS. In response to primary seal leakage or in the event of failure, the 8628VSC faces close-down to seal the process and direct process flow to flare or drain. This represents a less complex alternative to dual unpressurised seals using a API Plan 52.

#### **Performance Capabilities**

• Temperature: -4°F to 400°F/-20°C to 204°C

• Pressure: Up to 75 psig/5 barg (gas operation)
Up to 1450 psig/100 barg (liquid operation)

• Speed: Up to 6000 fpm/30.5 ms<sup>-1</sup>

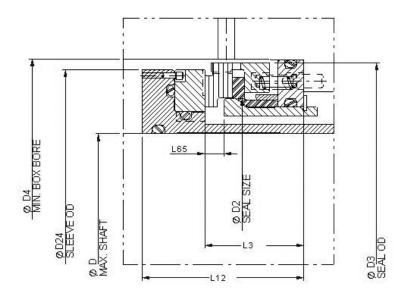

#### **Design Features**

- Unique proven secondary seal technology prevents wear to the sealing diameter and prevents secondary seal hang-up
- Simplified dual containment using plan 76 enables remote operation
- Non-contacting operation the compressed gas in the grooves separates the faces and creates a non-contacting seal with near zero wear and long seal life
- Bi-directional design: Patented bi-directional groove pattern enables seal to keep running successfully even with sudden change in shaft direction
- Axially compact and easy to install seal head assembly
- Balanced design and premium face materials enables high pressure capability
- Ear drive design on primary ring increase drive torque capability
- No O-rings in the pusher head assembly to fret under pump shuttling
- Non-compressible flexible elastomer bellows

NON-PUSHER ELASTOMER, DRY RUNNING, NON CONTACTING, SECONDARY CONTAINMENT GAS SEAL

**Technical Specification** 

## Typical Arrangement/ Dimensional Data

The 8628VSC secondary containment seal is sized on known equipment dimensions used in pipeline applications. Sizes to fit common pipeline pumps up to 6.500 inch shafts.

#### Dimensional Data (Inches)

Seal Size	D Max.Shaft	D2	D3	D4	D6	D24	L3	L12	L65
